Web3D

Next Generation Internet Revolution

Project Introduction

Web3D is a decentralized Metaverse underlying data transmission protocol based on Web3.0, which aims to establish a decentralized information transmission channel for the Metaverse platform and the interstellar file system IPFS. W3D is the governance token of the protocol using the innovative POD algorithm (Proof of Destroy) to destroy and mine.

Community Governance

Fully Decentralized

Blockchain Powered

Privacy Focused

Product description

W3D NFT Storage

A decentralized data storage tool

The decentralized data storage tool based on the Web3D protocol is a decentralized storage service specially built for NFT and NFT metadata. W3D NFT Storage allows developers and NFT applications to protect their virtual assets and associated metadata through content addressing and decentralized storage powered by the IPFS system.

W3D NFT Start

A decentralized NFT publishing platform

W3D NFT Start allows users to release private and exclusive NFT collections with one click, adding wings of encrypted assets to traditional artists, and making people feel the charm of encrypted artworks through convenient operations.

W3D NFTShare

A decentralized NFT collection & trading platform

The NFT collection exchange based on the Web3D protocol allows artists to auction and sell their own creations, and at the same time is a platform for digital art lovers to communicate and collect. Collectors and artists can easily interact around their common hobbies. On the platform, users can see who the top collectors are, and can view descriptions and previous owners of the artwork itself.

Token Economics

0 Pre-Mining / 0 Private Sale / 0 Public Sale

Total issuance
2.1 million

10,000 Pieces **Create liquidity**

2.09 million **NFT computing power output**

Combustion Mechanism

Sales tax 5% distribution mechanism

3% Bonus to customers who pledge LP pool

0.5% Referrer rebate 0.25% for direct referrals, 0.25% for indirect referrals

1.5% Web3D Organization Construction

Web3D Consensus Protocol Mechanism

- Daily output of 210-84 pieces

Web3D Consensus Computing Power Acquisition

Time Factor

In order to quickly improve the consensus of users in the later period, Web3D has given the time factor to supplement the consensus. The time is multiplied by the computing power, and the daily bonus is 1% to 5%.

After the start of the Web3D consensus period, the time acceleration factor is assumed to be 1%. For each additional day, the time factor increases by 1%, and the peak value is 2

Example: First day 75%USDT+25%META=100 computing power

The next day 75%USDT+25%META=101 computing power

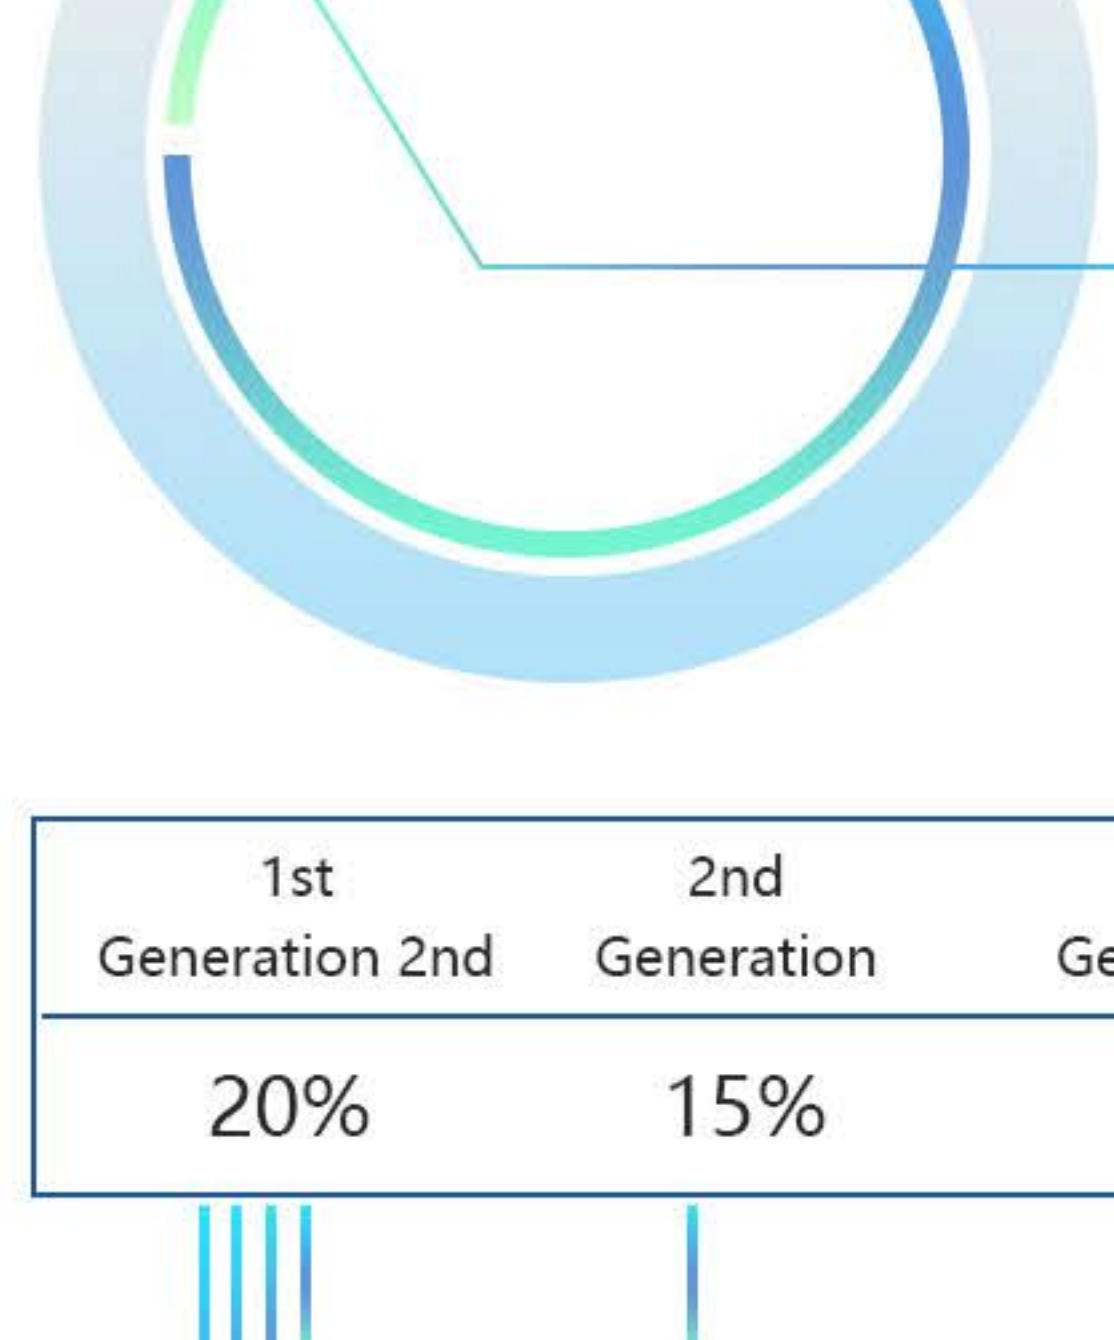

Revenue Mechanism

Extract W3D from consensus mechanism

- 8% node dividend,
- 3% community
- 3% Ecological construction
- 1% Referral Rebate (0.5% for 1st generation, 0.5% for 2nd generation)

Consensus promotion reward

75% buy W3D directly in W3DSWAP and destroy

25% for Consensus Referral Rewards

1st Generation	2nd Generation	3rd Generation	4-12th Generation	13-25th Generation
20%	15%	12%	3%	2%
500USDT for 2 generations				
1000 computing power for 5 generations				
2000 computing power for 10 generations				
5000 computing power for 25 generations				

Node Weighted Dividend 8%

Node assessment conditions (individual account has 5000U computing power, and the node must add at least 10000U computing power every week to be valid)

Grade	Direct Calculation Power	Performance Computing Power	Destroy Equivalent W3D	8% Dividend
Primary	3 个 1000U	5W U-15W U	1000U	40%
Intermediate	3 个 2000U	15W U-30W U	2000U	30%
Advanced	3 个 5000U	30W U-100W U	3000U	20%
Super	3 个 5000U	>100W U	5000U	10%

WEB 3.0

You call the shots in the value era of WEB 3.0
